PROFILE SUMMARY

Software Developer with experience building enterprise web applications, real-time dashboards, and analytics solutions for a multi-agency government platform. Experienced in frontend and backend development using Vue.js, Node.js, Express.js, PostgreSQL, RESTful APIs, and SQL. Skilled in developing responsive user interfaces, backend services, API testing, and database validation while delivering reliable, maintainable, and well-tested software. Quick to understand existing codebases and system architecture, with a strong focus on continuous improvement and delivering high-quality software solutions.

WORKING EXPERIENCES

Software Developer

Oct 2025 – Present

Millennium Radius Sdn. Bhd.

Project: Real-time emergency operations dashboard and analytics platform developed for Telekom Malaysia (TM), supporting large-scale operational monitoring, resource tracking, and data-driven decision making.

- Developed end-to-end frontend and backend features for a real-time emergency operations dashboard using Vue.js, Node.js, Express.js, and PostgreSQL, supporting resource monitoring, live asset tracking, and operational activities.
- Built a reusable user management module with search, sorting, and pagination, adopted across multiple portals to improve maintainability and reduce duplicated development effort.
- Developed chart printing, Excel/PDF export, and reporting features with dynamic filtering and adaptive chart scaling to produce accurate, presentation-ready reports.
- Enhanced dashboard usability by implementing interactive tooltips, cursor-following hover effects, and unified chart data-view functionality for improved operational data visualization.
- Performed API testing and database validation using Postman and DBeaver while investigating and resolving frontend and backend defects through existing codebase analysis.
- Collaborated within a multi-branch Git/GitLab workflow to deliver coordinated frontend and backend enhancements in an Agile development environment.

Frontend Developer

Jan 2022 – Sep 2025

mm2 Screen Management Sdn. Bhd.

- Developed responsive cinema web applications using HTML, CSS, JavaScript, and Tailwind CSS.
- Built real-time cinema seating visualizations and operational dashboards to support daily cinema operations.
- Developed customizable food & beverage ordering modules integrated with backend services.
- Collaborated with designers and backend developers to deliver responsive and user-friendly UI components.
- Debugged and resolved frontend issues to improve application performance, usability, and user experience.

Web Developer (Intern → Freelance)

Oct 2020 – Oct 2025

Quick Time Machines Sdn. Bhd.

- Maintained an e-commerce platform using Shift4Shop and Excel while ensuring product data accuracy.

- Updated website visuals, product images, and promotional content to maintain a consistent online presence.
- Developed responsive HTML, CSS, and JavaScript email newsletters for digital marketing campaigns.
- Created marketing content using Canva and CapCut for social media campaigns.
- Applied basic SEO improvements using Google Search Console and metadata optimization.

EDUCATIONAL BACKGROUND

Bachelor of Computer Science (Artificial Intelligence) with Honors

2017 – 2021

Universiti Teknikal Malaysia Melaka (UTeM)

CGPA: 3.41

Matriculation Programme (Science Module III)

2016 – 2017

Kolej Matrikulasi Melaka (KMM)

ACADEMIC PROJECTS

Final Year Project

Year 3, Semester 2

Image Forgery Detection System

- Developed a MATLAB-based image analysis system capable of detecting copy-move image forgery using digital image processing techniques. Implemented algorithms to detect forged image regions and visualize results.

Workshop 2 (Group Project)

Year 3, Semester 1

Emotion Recognition Robot

- Designed and developed an emotion recognition robot using EV3 LEGO Mindstorms and TETRIX. Implemented emotion-based movement responses to simulate basic human-robot interaction.

Workshop 1 (Individual Project)

Year 2, Semester 1

Bus Booking System

- Developed a web-based bus reservation system using PHP, MySQL, HTML, CSS, and JavaScript. Implemented customer registration and booking management to simulate a complete booking workflow.

SKILLS

Frontend	: Vue.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Vuetify, Bootstrap, Sass, Pinia, React
Backend & Database	: Node.js, Express.js, RESTful APIs, Sequelize, PostgreSQL, MySQL, Oracle
Languages	: TypeScript, PHP, C++, Java, SQL
Tools	: Git, GitLab, GitHub, Postman, DBeaver, pgAdmin, phpMyAdmin, Figma, Penpot, Webflow
